A. Lauks-Dutka,  
M. Yung

## Introduction

### Challenges

Shared personal data

Semantically neutral pseudonymization

Linked data

Classification as "personal data"

Processing "non-personal data"

Data aggregation

### GDPR Reality

### De lege ferenda

Shared data

Consent

non-personal data aggregation

### Conclusion

## What is the GDPR?

- key element of **information protection**
- **strict legal requirements**, aimed to guarantee **control over processing** personal data
- privacy **by-design**, **revocable** consent to process data

effectively in force since May 2018

## Why so important?

- activities in EU
- offering services and good to users in EU (regardless of origin)

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

### Introduction

#### Challenges

Shared personal data

Semantically neutral pseudonymization

Linked data

Classification as "personal data"

Processing "non-personal data"

Data aggregation

#### GDPR Reality

#### De lege ferenda

Shared data

Consent

non-personal data aggregation

#### Conclusion

## Data Implicit Metastructure

### *Data Subject*

the person whose data is processed

### *Legal Basis*

- consent of data subject, or
- legal obligation, or
- ...

### *Data*

explicit content

- easy **testing legality** of data processing (who, what, how to process)

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

### Introduction

#### Challenges

Shared personal data

Semantically neutral pseudonymization

Linked data

Classification as "personal data"

Processing "non-personal data"

Data aggregation

#### GDPR Reality

#### De lege ferenda

Shared data

Consent

non-personal data aggregation

#### Conclusion

## Data Explicit Structure

### Data Subject

???

### Legal Basis

- ???
- ???
- ???
- ???

### Data

explicit content

## Belief of GDPR authors:

- **implicit components should be easy to derive** from the data or its context
- **only a reasonable effort** necessary

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

## Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

# GDPR Challenges

## Data Implicit Metastructure

### Data Subject

Person A

### Data Subject

Person B

### Legal Basis

- consent of A?
- consent of B?
- ...

### Data D

content  
concerning  
**A and B**

- data *D* concerns identifiable data subjects *A* and *B*
- one **cannot split** *D* into  $D_A$  (concerning *A*) and  $D_B$  (concerning *B*) without changing semantics<sup>1</sup>

<sup>1</sup>examples to come

## Consent problem

- 1 a **consent** of which party ( $A$  or  $B$  or ( $A$  and  $B$ )) is **required to process  $D$**  according to GDPR?
- 2 what to do if there are consents' **discrepancies**?

## Example:

**$A$  requests to store  $D$** , while  **$B$  asks to remove  $D$**

### Deadlock:

- option 1:**  $D$  is erased following the request of  $B \Rightarrow$  the right of  $A$  to protection of her data from erasure is **violated**
- option 2:**  $D$  is kept following the request of  $A \Rightarrow$  the right-to-be-forgotten of  $B$  is **violated**
- option 3:** consent of all data subjects is required to process  $\Rightarrow$  both storing and erasing are **illegal**

# Solution attempt - reverting to the basic model

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Splitting process

Split a dataset into data chunks so that

- a **single data subject** for each chunk,
- **the original semantics is preserved**

## Problems

- the conversion process should be **automatic** or semi-automatic
- the data might be logically inseparable **without changing semantics**

## Pseudonymization as a silver bullet?

- if there are  $k$  data subjects in data  $D$ , then create  $k$  **pseudonymized copies of  $D$**
- all data subjects **pseudonymized** in  $D_A$  **except for** data subject  $A$

# Semantically neutral pseudonymization

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

**Semantically  
neutral  
pseudonymization**

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Ineffective pseudonymization problem

It might be infeasible...

## Example

A medical record:

*"Alice suffers the same symptoms as her brother Bob"*

### Pseudonymization attempts

- *"Bob" → pseudonym X:*  
*"Alice suffers the same symptoms as her brother X"*
  - if Alice has a single brother, X becomes an **identifiable** person, so pseudonymization is not effective
- *"her brother Bob" → pseudonym X:*  
*"Alice suffers the same symptoms as X"*
  - **semantic difference** - we lose the genetic context
- *"Y suffers the same symptoms as her brother X":*
  - **useless** for the medical treatment of Alice

## Example

- 1 Alice and Bob have published: "*Alice and Bob earn together  $x$  EUR*" in a public dataset  $D_1$ .
- 2 Later Alice gives her consent to publish  $M'$ : "*Alice earns  $y$  EUR*" in a public cloud  $D_2$  run by  $P_2$ .

## Example

- 1 Alice and Bob have published: "*Alice and Bob earn together  $x$  EUR*" in a public dataset  $D_1$ .
- 2 Later Alice gives her consent to publish  $M'$ : "*Alice earns  $y$  EUR*" in a public cloud  $D_2$  run by  $P_2$ .

## Problems

- can the provider  $P_2$  of  $D_2$  **publish**  $M'$  following the request of Alice?  
– **this would mean publishing information "*Bob earns  $x - y$  EUR*"**
- is  $P_2$  obliged to perform a **semantic analysis** of the request having in mind **privacy violations of third parties**?
- what is the necessary **scope** of the semantic analysis?
- how far is  $P_2$  **responsible** for misclassification?

# Classification as "personal data"

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Personal data

*D* falls into the category of **personal data**  $\iff$  it concerns an **identifiable person**

## Relatively easy case: positive decision

data containing **explicit identifiers** of data subjects  $\Rightarrow$  *personal data*

## Frequently hard case: negative decision

a proof of impossibility of identification **is not just an absence of explicit identifiers** in the data

impossibility proofs are generally harder as they concern **all possible ways of identification**

# Classification as "personal data"

challenges

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Decision context

what is the right **decision context** from the point of view of GDPR:

### 1 just the data by itself?

- easy to implement but so trivial to violate GDPR goals without violating the rules

### 2 data in the context of all existing datasets?

- simply unrealistic

### 3 information available to the data processor?

- what is available? E.g. in case of an unlimited access to database run by a **third party**?

*Personal Data and Encryption in the European General Data Protection Regulation, Gerald Spindler, Philipp Schmechel, Journal of Intellectual Property, Information Technology and E-Commerce Law, 2016* **no reaction!**

# Classification as "personal data" challenges

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Temporal validity of a decision

how to insure that the classification *personal/non-personal* is  
**up to date:**

- continuous monitoring?
- periodic monitoring?
- event driven?

# Consequences of processing "non-personal data"

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

## Introduction

## Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

## Processing "non-personal data"

Data aggregation

## GDPR Reality

## De lege ferenda

Shared data

Consent

non-personal data  
aggregation

## Conclusion

## Processing non-personal data

GDPR does not concern processing non-personal data  
so their processing is not restricted by GDPR?

# Consequences of processing "non-personal data"

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Processing non-personal data

GDPR does not concern processing non-personal data  
so their processing is not restricted by GDPR? **NO!**

## Non-personal → personal data conversion and transfer problem

Party A

Non-personal dataset  $D$

transfer of  $D$

Party B (Country with no GDPR)

- 1  $D' := \text{De-anonymization}(D)$
- 2 **publish personal data  $D'$**

## Can anybody be accused of GDPR violations?

- **neither** party B
  - – as long as B does not offer goods or services in Europe
- **nor** party A
  - A has not transferred any personal data

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

**Data aggregation**

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Example

- party  $A$  holds a dataset  $D$  containing personal data of its clients collected according to GDPR
- $A$  **aggregates** data  $D$  by computing the average amount of money spent by the clients of  $A$

## Example

- party  $A$  holds a dataset  $D$  containing personal data of its clients collected according to GDPR
- $A$  **aggregates** data  $D$  by computing the average amount of money spent by the clients of  $A$

## Challenges

- 1 does the **result** of an aggregation operation fall into the category of **personal data**?
- 2 more general: at which moment the aggregated data **loses** its attribute **personal data**?
- 3 is aggregation **processing** of **personal data** (assuming that its inputs are personal data)?

## Example

- party  $A$  holds a dataset  $D$  containing personal data of its clients collected according to GDPR
- $A$  **aggregates** data  $D$  by computing the average amount of money spent by the clients of  $A$

## Challenges

- 1 does the **result** of an aggregation operation fall into the category of **personal data**?
- 2 more general: at which moment the aggregated data **loses** its attribute **personal data**?
- 3 is aggregation **processing** of **personal data** (assuming that its inputs are personal data)?

## Detailed problem - the Right-to-Anonymize Data

**Is it legal** from the point of view of GDPR to create a dataset  $Anon(D)$  by **anonymization of all data records of  $D$** ?

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

non-personal data  
aggregation

Conclusion

# Reality of GDPR

## Introduction

## Challenges

Shared personal data

Semantically neutral pseudonymization

Linked data

Classification as "personal data"

Processing "non-personal data"

Data aggregation

## GDPR Reality

### De lege ferenda

Shared data

Consent

non-personal data aggregation

### Conclusion

## Business

- many efforts aiming to achieve compliance with GDPR
  - ... or at least **collect arguments about *due diligence*** for the case of a conflict with data protection supervision authorities
- 
- some branches of information processing industry in a state of **paralysing legal risks** – e.g. **AI companies in Europe**

## Supervising authorities

- limited guidance on “how to implement GDPR” and interpretation of its rules,  
**... well, this is not an easy task as we have seen**
- **threat of misusing** power for particular economical and political advantage
- **strict position of supervising authorities** – example: EDPS versus EASO and a decision banning processing (anonymized) data by EASO (fighting smugglers)
- **... and tolerance elsewhere** – e.g. paparazzi ...

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

## Introduction

## Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

## GDPR Reality

## De lege ferenda

Shared data

Consent

non-personal data  
aggregation

## Conclusion

## Protection level achieved

- GDPR called a **Paper Tiger** – useless against severe violations by clever adversaries,
- ... **not much real impact and improvement** of situation of an **average person**,
- ... **but** annoying questions about cookies, problems to access information, ...

**to some extent GDPR is busy with problems created by GDPR**

## GDPR as a Holy Grail

with a few exceptions<sup>a</sup> the IT community is passive:

- R&D on how to comply with the GDPR
- almost no critics and feedback to the authorities

---

<sup>a</sup>e.g. Center for Data Innovation

## GDPR as an evolving regulation

EU report from June 24:

*Communication - two years of application of the General Data  
Protection Regulation*

<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52020DC0264>

## Report focus

- **complimentary regulations** in EU – **incompatibility problems still unresolved** – the devil is in details
- **supervisory authorities** – it seems that **cooperation need to be improved** – different approaches, unharmonized guidelines, ...  
*a company active in many EU countries – which guidelines to follow?*
- **no representatives in EU** – of companies offering goods and services in EU (they are obliged to have!)  
*no problem for big corporations to have representatives, for SME a serious cost*  
*To become compliant the simplest solution would be to block IP addresses from EU.*  
*Are we going to build a European Wall?*

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal

"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data  
aggregation

Conclusion

## Report's section "The application of the GDPR to new technologies"

*The GDPR, having been conceived in a technology neutral way, is based on principles, and **is therefore designed to cover new technologies as they develop.***

**Our opinion:** as we have shown, **the GDPR model is a severe limitation for development of new technologies.**

*It is seen as an **essential and flexible tool** to ensure that the development of new technologies is in compliance with fundamental rights.*

**Our opinion:** we are **not convinced about flexibility**, definitely a proper implementation of the GDPR principles requires deep rethinking many elements of IT systems – **the process might be very costly and time consuming**

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

## Introduction

### Challenges

Shared personal  
data

"non-personal data"

Data aggregation

### GDPR Reality

#### De lege ferenda

Shared data

Consent

non-personal data  
aggregation

### Conclusion

## Report's section "The application of the GDPR to new technologies"

*The data protection and privacy legislative framework **proved its importance and flexibility during the COVID-19 crisis**, notably in relation to the design of the tracing apps and other technological solutions to fight the pandemic.*

**Our opinion: GDPR contributed a lot** to defer creating tracking apps that would collect data on citizens not really necessary for fighting the epidemics

However,

- the first European initiatives have been not compliant with GDPR.
- COVID-19 can still be used as an excuse for collecting data in unrestricted way.

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

## Introduction

### Challenges

non-personal data  
aggregation

#### Conclusion

## Report's section "The application of the GDPR to new technologies"

*Future challenges lie ahead in clarifying how to apply the **proven principles** to specific technologies such as artificial intelligence, blockchain, Internet of Things or facial recognition which require a monitoring on a continuous basis.*

**Our opinion:** "proven principles" sounds like **lack of interest for rethinking the basic principles and resolving the incompatibility** between the current law and emerging technologies

- no revision of GDPR planned, only some soft approach when SME are concerned,
- the next revision of GDPR in 2024!

M. Kutyłowski,

## Steps – technology driven approach

- 1 identify needs
- 2 analyse what is **doable** from the **technical, economical and social point of view**
- 3 formalize legal requirements as a pragmatic compromise between different factors
- 4 adjust the systems

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

**De lege ferenda**

Shared data

Consent  
non-personal data  
aggregation

Conclusion

## Steps – technology driven approach

- 1 identify needs
- 2 analyse what is **doable** from the **technical, economical and social point of view**
- 3 formalize legal requirements as a pragmatic compromise between different factors
- 4 adjust the systems

## Steps – law driven approach

- 1 identify needs
- 2 formulate goals and corresponding legal rules
- 3 **let the technicians to find a solution**
- 4 create supervision authorities, collect fines,...

It does not work this way: **what if there is no reasonable technical solution??**

## Rule: Progressive/regressive data processing

Each data record should have a field or multiple fields **"data subject"**.

The operations on personal data should be classified as:

- **progressive** (creates a new information contents) – a **consent of all** data subjects is **necessary**,
- **regressive** (strictly limited to erasing information contents) – a request/withdrawal of the consent by **just one** data subject is enough to legitimize the operation.

- clear situation for data processors
- warning for users: a co-owner of shared personal data can erase it without asking anybody

## Rule: Extended context of a consent rule

A **consent** should be understood as the right to process data **regardless** of the **context** that may emerge **outside**

- eliminates infeasible analysis by data processor
- only a data subject might be aware of all contexts of the consent

## Rule: "Personal data" as an attribute of data & processing party

A data shall be considered a **personal data** by a party processing it

**this party** can **identify** a physical person related to these data.

- implementable, reduces the risk but still protects privacy

## Rule: Impact of processing non-personal data

A party  $X$  processing **non-personal data** is responsible for **all consequences** of that processing from the point of view of GDPR.

## Particular case: Admissibility of data transfer rule

A may **send** data  $D$  to  $B$   $\iff$  A can **reasonably** assume that either:

- $D$  is **not-personal data** for  $B$  or any potential partner of  $B$ , or
- $B$  **complies** with the GDPR obligation and has the right to keep this data.

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung

Introduction

Challenges

Shared personal  
data

Semantically  
neutral  
pseudonymization

Linked data

Classification as  
"personal data"

Processing  
"non-personal data"

Data aggregation

GDPR Reality

De lege ferenda

Shared data

Consent

non-personal data

**aggregation**

Conclusion

## Rule: Narrow definition of data processing

A data processing  $P$  where **personal data** are included in the **input** of  $P$  shall **not** be understood as **processing of personal data**, if the **output** of  $P$  (explicit and implicit) does **not** contain **personal data**.

→ **freedom for data analysis** as long as the output does not violate the rights and freedoms of people

many (detailed) issues left open

examples:

- 1 what to do with personal data processed by a party that becomes inactive (abandoned data)?
- 2 how does the GDPR regulation apply to a party holding a share of a personal data according to a secret sharing scheme?
- 3 P2P technology, quorum systems, ... versus GDPR
- 4 right-to-be-forgotten and distributed ledger technology
- 5 ...

It's time:

- to focus on **rethinking** the general **paradigms** of GDPR!
- to seek for **improvements** and **better legal solutions** based on realistic privacy needs and computing goals!

**the EU review on GDPR is a step forward, but most of the work to be done!**

M. Kutyłowski,  
A. Lauks-Dutka,  
M. Yung
