data structures, discrete mathematics	, prob	ability analysis	5.			
		COURSE OB	JECTIVES			

C1 Aquainting students with algorithmic aspects of Peer-to-Peer networks.

C2 Preparing students to designing algorithms for large and not controlled distributed systems.

COURSE LEARNING OUTCOMES

The scope of the student's knowledge:

W1 Knows basic Peer-to-Peer networks existing in practice and their theoretical foundations.

W2 Knows techniques applied in distributed hash tables and problems appearing therein.

W3 Knows methods of fast file transmission in large distributed systems.

The student skills:

U1 Is able to use mathematical knowledge in the analysis of algorithms.

U2 Is able to show inoptimal algorithmic solutions in distributed systems.

U3 Is able to apply randomized algorithms to solve problems in unreliable distributed environment.

The student's social competence:

K1 Understands the need to in-depth analyse a given algorithmic problem and the importance of this analysis in the context of a given distributed system.
